

SMASH - MISSION 2 - CONCEPT ART BRIEF

Nine beach buildings, drawn so they can actually be built

For the AI producing concept images. Self-contained - you need no other document.

Project: Demolition Contracts (FierceTigerGameJam) Revision 1 - 2026-08-30

YOUR JOB

Draw nine buildings. One image per level, to the cell dimensions given in section 5. That is the whole deliverable.

NOT YOUR JOB

The map JSON. Someone else writes it from your image. Do not produce JSON, wall groupings, manifests or entry counts - they will be discarded.

WHY THE SPLIT

Your images are good. The two JSONs delivered for Level 2 were not: one had the wrong id, the other had a stair six cells deep when the order said one. Meanwhile the concept image you drew for that level was better than either render. Play to that. Draw; the geometry is handled downstream.

1. THE ONE RULE THAT MATTERS MOST

ONE BRICK IN YOUR IMAGE = ONE CELL OF THE GRID.

Every building is made of cubes 0.25 m on a side. There are no smaller pieces, ever. If you draw a wall as a hundred little bricks and the grid says the wall is six cells wide, you have promised something the game cannot build, and the image gets rejected. This has already happened once.

Before drawing, read the grid line for that level: "12 wide x 12 tall x 6 deep" means exactly 12 cubes across, 12 up, 6 back. Count them in the image.

A useful self-check: can you count the cubes along the top edge and get the stated width? If not, redraw.

2. THE PALETTE - THREE MATERIALS, NOTHING ELSE

BRICK	warm sandy red-brown. Sand-brick, bleached timber, decking. The body of almost everything in this mission.
GLASS	pale blue, slightly transparent. Sea-view glazing, wind screens, slide tubes, lantern rooms.
CONCRETE	flat mid grey. Stone piers, breakwater, rock plinths, the lighthouse base. Appears from Level 7 only.

No wood grain, no thatch, no fabric, no metal, no water, no sand texture.
The beach is carried by SHAPE, not by inventing materials.

Background: plain white or very light grey. No ground plane, no sky, no scenery. The building alone.

View: isometric, three-quarter, slightly from above - the same angle for all nine, so the set reads as one family.

3. WHAT MAKES A DRAWING BUILDABLE

3.1 EVERYTHING RAISED STANDS ON A VISIBLE LEG

Beach buildings sit on stilts, piles and posts, and that is the point of the whole mission - the player wins by cutting the support, not by grinding the

mass. So every raised thing in your image must be VISIBLY carried:

- a hut on stilts -> draw the stilts, and draw the floor resting on their tops, not floating a cell above them
- a pier deck -> draw a post under the deck at every bent
- a cantilever, a slide, a balcony -> draw a prop under it every few cells

Anything that appears to hang off the side of a building with nothing underneath cannot be built: in the engine it would hang in the air forever and make the level impossible to finish. If you draw it, it gets cut.

3.2 HOLLOW, NOT SOLID

These are shells one cell thick with real openings. Draw doors and windows as actual holes you can see through, not as painted rectangles.

3.3 OPENINGS ARE NARROW

A hole two cells wide in a face only four cells wide removes everything holding the wall above it. Prefer tall narrow slits, or one full storey of glass - those are the two shapes that work.

3.4 ONE AXIS OF SYMMETRY AT MOST

A building symmetric on both axes reads as a box whatever else it does. Offset the stair, the window, the roof box.

3.5 KEEP THE SILHOUETTE SIMPLE AND DISTINCT

Nine buildings that share a palette need to differ in OUTLINE: legs, decks, a tall thin shaft, a low wide fort, a diagonal slide. If two levels have the same profile, one of them is wrong.

4. THE STANDARD TO MATCH - LEVEL 2, APPROVED

The Lifeguard Tower image is the reference for the whole mission. What it gets right, and what every other image should copy:

- four thin legs, clearly one cell each, clearly carrying the deck
- the deck overhangs the legs by one cell, so the tower reads as built rather than extruded
- the cabin sits inset on the deck, smaller than it
- the flat roof overhangs the cabin again - two clean overhangs stacked
- a raised box on the roof so the top is not a bare slab
- a long stair with real treads on a solid stepped body, OFFSET to one side
- two windows with a mullion between them, not one hole

The rendered game version of that image is attached as the style anchor. Your images should look like buildings that would render like that.

5. THE NINE LEVELS

Format: grid in cells (wide x tall x deep), what to draw, and the support that must be visible in the image.

LV1 BEACH HUT ROW

14 x 6 x 5

Three tiny huts side by side, each on four short stilts, each with a DIFFERENT roof: one flat, one stepped, one peaked. Clear gaps of empty sand between them - they are three separate targets, not a terrace.

VISIBLE SUPPORT: four short stilts per hut, floors resting on their tops.

PROMPT: "isometric voxel beach huts, three small cube-block cabins side by side with different roofs - one flat, one stepped, one peaked - each raised on four short stilts, sandy brick tones, chunky cube blocks, plain white background"

- LV2 LIFEGUARD TOWER 12 x 12 x 6 DONE
Approved. Use it as the reference for the rest.
- LV3 THE PIER 10 x 7 x 11
A boardwalk running AWAY from the viewer into the distance: four post-and-beam frames one behind another carrying a plank deck, low railings, a small kiosk at the far end. The only level that uses depth as its subject - the image must show the recession clearly.
VISIBLE SUPPORT: two posts per frame, with deck planks sitting on the beam above each pair. Four frames, evenly spaced.
PROMPT: "isometric voxel wooden pier running away into the distance, four post-and-beam frames carrying a plank deck, low railings, small kiosk at the far end, brick-brown cubes, chunky blocks, plain white background"
- LV4 BEACH BAR 12 x 7 x 7
Open front - no front wall at all. A heavy flat roof carried by the back wall and just two slim posts at the front corners. Pale blue glass panels closing the two sides. A counter with small blocks lined up on it.
VISIBLE SUPPORT: the two front posts, roof resting directly on their tops. They should look barely adequate - that is the level's joke.
PROMPT: "isometric voxel beach bar, open front with a heavy flat roof carried on two thin posts, pale blue glass panels closing the two sides, a counter with small blocks on it, sandy brick and blue glass cubes, chunky blocks, plain white background"
- LV5 SEAVIEW RESTAURANT 12 x 9 x 7
Two storeys plus a terrace. Solid brick ground floor with a wide entrance. The ENTIRE middle storey is glass - no brick corners, no mullions, a clean glass band all the way round. Brick roof terrace on top with small blocks and parasols.
VISIBLE SUPPORT: none needed - the glass storey IS the weak point and it must look like it. Do not draw columns through it.
PROMPT: "isometric voxel seaside restaurant, solid sandy brick ground floor, the entire middle storey made of pale blue glass with no columns, brick rooftop terrace with small blocks and parasols, chunky cube blocks, plain white background"
- LV6 WATERSLIDE TOWER 14 x 11 x 7
A brick stair tower with narrow slit windows, and a pale blue glass tube descending from the top in a stepped diagonal to a low pool rim. A small ticket kiosk stands separately beside it.
VISIBLE SUPPORT: THIS IS THE CRITICAL ONE. Thin brick props under the slide every two or three cells of its run, each standing on the ground, with the tube resting on top of them. A slide attached only to the tower's flank cannot be built.
PROMPT: "isometric voxel water slide tower, tall brick stair tower with narrow slit windows, a stepped diagonal pale blue glass tube descending from the top to a low pool rim, thin brick props standing on the ground holding the tube up along its whole run, small ticket kiosk to the side, chunky cube blocks, plain white background"
- LV7 LIGHTHOUSE 9 x 14 x 6
Grey concrete rock base. A tapering brick shaft that steps inward twice as it rises. Pale blue glass lantern room at the top with a grey gallery rail. A small brick keeper's cottage at the foot, standing separately.
First appearance of concrete. Tallest thing in the mission.
VISIBLE SUPPORT: the shaft on its base. Keep the base SMALL - two or three rows - it is meant to be smashed by the falling tower, not shot.
PROMPT: "isometric voxel lighthouse, small grey concrete rock base, tapering sandy brick tower stepping inward twice as it rises, pale blue glass lantern room at the top with a grey gallery rail, small brick keeper's cottage at the foot, chunky cube blocks, plain white background"
- LV8 SEA FORT 12 x 10 x 8
A low grey concrete bastion on a stone plinth, with a CONTINUOUS horizontal

pale blue glass slit running right around it. Inside the open courtyard, two small brick huts. Alternating grey caps along the top edge. The slit is the way in and must be unbroken - no concrete mullions. VISIBLE SUPPORT: none - this is the one level solved by shooting through the opening rather than by cutting a leg. PROMPT: "isometric voxel coastal fort, low grey concrete bastion on a stone plinth with a continuous horizontal pale blue glass slit running around it, open courtyard inside containing two small sandy brick huts, alternating grey caps along the top edge, chunky cube blocks, plain white background"

LV9 BOARDWALK RESORT (BOSS)

16 x 12 x 10

Three buildings sharing one beach: the lifeguard tower on legs, the open beach bar, and a short pier stub on piles. A low grey breakwater along the front ties them together. Draw them CLOSE - close enough that the tower would fall onto the pier and the pier onto the bar - but with clear gaps of empty sand between them.

VISIBLE SUPPORT: legs, posts and piles on all three, as in their own levels. Draw everything one size smaller than its own level - three buildings have to fit where one usually goes.

PROMPT: "isometric voxel beach resort scene, a lifeguard tower on four thin legs, an open beach bar with a flat roof on posts and blue glass side panels, a short wooden pier on piles, a low grey breakwater along the front, sandy brick and blue glass and grey stone cubes, chunky blocks, plain white background"

6. WHAT TO SEND BACK

Per level, two things and nothing else:

1. The image.
2. Three lines of text:
 - dimensions used: e.g. "12 wide x 12 tall x 6 deep"
 - visible support: e.g. "four legs, deck resting on their tops"
 - anything you were unsure fits the grid

If a building will not fit its grid, SAY SO instead of shrinking the bricks. The grid can be argued about; the cell size cannot.

7. CHECKLIST BEFORE SENDING

- [] one brick = one cell; count the cubes along the top edge
- [] dimensions match the level's grid line in section 5
- [] only brick, glass and concrete; concrete only on LV7-9
- [] plain white background, isometric, same angle as the others
- [] every raised mass stands on a leg that is visible in the image
- [] nothing hangs off a side with nothing underneath
- [] openings are real holes, narrow, and you can see through them
- [] at most one axis of symmetry
- [] the silhouette is different from the other eight

END
