

SMASH - MISSION 2 - LAYOUT RECIPES

Eight remaining levels, laid out the way LV2 is laid out

Reads with: SMASH_Mission2_Production_Guide

Project: Demolition Contracts (FierceTigerGameJam) Revision 1 - 2026-08-30

THE PATTERN, LOCKED

Taken from map_m2_002_lifeguard_tower, the approved layout. Every level below follows it.

8 x 11 x 6 · 102 entries · 15 walls · 0 loose

leg_front_left	6	x1	y0-5	z1	one cell wide, its own wall
leg_front_right	6	x5	y0-5	z1	
leg_back_left	6	x1	y0-5	z4	
leg_back_right	6	x5	y0-5	z4	
deck_left	10	x1-3	y6	z1-5	slab split in two halves
deck_right	10	x4-6	y6	z1-5	
cabin_front_left	2	x1	y7-8	z1	shell in small named pieces
cabin_front_right	2	x4-5	y7-8	z1	
cabin_left	3	x1	y7-8	z2-3	
cabin_right	4	x5	y7-8	z2-3	
cabin_back	6	x1-5	y7-8	z4	
roof_eave_left	8	x0-2	y9	z1-4	eave row, overhangs
roof_eave_right	8	x3-5	y9	z1-4	
roof_ridge	3	x1-5	y10	z2	one ridge row on top
stair_ramp	22	x7	y0-6	z0-5	one wall, runs in depth

WHAT MAKES IT WORK - carry all six into every level below

1. LEAN. ~100 entries, small grid. Nothing is thickened "to be safe".
2. Every leg / post / pile is ONE cell wide and ITS OWN wall.
3. Horizontal slabs split LEFT / RIGHT, so half can drop while half stands.
4. The shell is many small named pieces, not one box.
5. Roof = an eave row that overhangs + a ridge row on top. Two rows, and that is what makes a hut read as a hut.
6. ZERO loose blocks. No scattered debris.

NAMING: <part><position>. leg_, post_, pile_, deck_, floor_, wall_, cabin_, roof_eave_, roof_ridge_, stair_, kiosk_. Readable in the hierarchy.

COATING: Mission 2 has brick armoured everywhere - just leave the flag out. Glass gets "bare": true. Concrete is armoured from LV7, so also no flag.

LV1 BEACH HUT ROW 14 x 6 x 5 ~100 entries

Three tiny huts side by side on short stilts, three different roofs. Three separate toys - the level teaches choosing a target.

Hut A x0-2 · Hut B x5-7 · Hut C x10-12 · all at z1-3 · gaps at x3-4, x8-9

per hut (repeat with the hut's own prefix a_ / b_ / c_):

<h>_stilt_fl	2	x(left)	y0-1	z1	
<h>_stilt_fr	2	x(right)	y0-1	z1	
<h>_stilt_bl	2	x(left)	y0-1	z3	
<h>_stilt_br	2	x(right)	y0-1	z3	
<h>_floor	9	3x3	y2	z1-3	covers all four stilts
<h>_shell_front	~7	ring half	y3-4		L-shape, wraps a corner
<h>_shell_back	~7	ring half	y3-4		the other L
<h>_roof	9	3x3	y5	z1-3	

roofs differ: A flat 3x3 · B stepped (3x3 at y5 plus a 1x1 at the centre)
· C peaked (a single ridge line x(mid) at y5)

CUT: two stilts on one side of any hut. It tips into its neighbour.
 WATCH: no wall may contain cells from two huts. Check the wall list.

LV3 THE PIER 10 x 7 x 11 ~150 entries

A boardwalk running away from the player on four pile bents, kiosk at the far end. The depth level - the only one that uses z as its subject.

pile_a_left / a_right	4 ea	x3 / x6	y0-3	z0	bent A, nearest
beam_a	4	x3-6	y4	z0	
pile_b_left / b_right	4 ea	x3 / x6	y0-3	z3	
beam_b	4	x3-6	y4	z3	
pile_c_left / c_right	4 ea	x3 / x6	y0-3	z6	
beam_c	4	x3-6	y4	z6	
pile_d_left / d_right	4 ea	x3 / x6	y0-3	z9	
beam_d	4	x3-6	y4	z9	
deck_near	~20	x2-7	y5	z0-4	
deck_far	~24	x2-7	y5	z5-10	
rail_left / rail_right	~11 ea	x2 / x7	y6	z0-10	broken into 3-cell runs
kiosk_shell_a / _b	~10 ea	3x3 ring	y6-8	z9-10	
kiosk_roof	9	3x3	y9	z9-10	

CUT: bent A. The near deck drops, and each bent behind it follows.
 WATCH: THE MOST LIKELY LEVEL TO PRODUCE A FLOATING DECK. deck_near must contain the cells directly above piles a and b; deck_far above c and d.
 Never put the deck and a beam in the same wall - then a cut pile does nothing until the whole pier dies at once and the pancake never happens.

LV4 BEACH BAR 12 x 7 x 7 ~140 entries

Open front, heavy flat roof on two slim posts, glass wind-screens at the sides, bottles on the counter.

post_left	5	x2	y0-4	z0	the only front support
post_right	5	x9	y0-4	z0	
backwall_left	~15	x0-5	y0-4	z6	
backwall_right	~15	x6-11	y0-4	z6	
counter	~6	x3-8	y2	z4	
screen_left	12	x0	y1-4	z1-5	GLASS, "bare": true
screen_right	12	x11	y1-4	z1-5	GLASS, "bare": true
roof_eave_left	~21	x0-5	y5	z0-6	
roof_eave_right	~21	x6-11	y5	z0-6	
roof_ridge	~6	x4-9	y6	z3	

CUT: one front post. The roof loses a corner and slaps down on the counter, popping the glass on the way.
 WATCH: the roof must NOT share a wall with the back wall, or it cannot tip.
 Roof cells must sit directly above both posts.

LV5 SEAVIEW RESTAURANT 12 x 9 x 7 ~170 entries

Solid brick ground floor, one entire glass storey, brick roof terrace. The glass waist - the building sits on its own weakest floor.

ground_front / _back	~18 ea	x0-11	y0-3	z0 / z6	
ground_left / _right	~10 ea	x0 / x11	y0-3	z1-5	
(entrance: 3 wide x 3 tall hole in ground_front, x4-6, y0-2)					
glass_front	~12	x0-11	y4-6	z0	GLASS, "bare": true
glass_back	~12	x0-11	y4-6	z6	GLASS, "bare": true
glass_left / _right	~7 ea	x0 / x11	y4-6	z1-5	GLASS, "bare": true

terrace_left	~21	x0-5	y7	z0-6	
terrace_right	~21	x6-11	y7	z0-6	
parapet_a / _b	~9 ea	perimeter	y8		broken in two runs

CUT: any glass face. That face releases, the terrace above it drops through.
 WATCH: DO NOT put a brick pier through the glass storey. The terrace being carried only by glass IS the level. Keep the glass exactly three rows.

LV6 WATERSLIDE TOWER 14 x 11 x 7 ~190 entries

Brick stair tower, glass tube descending in a stepped diagonal to a pool rim, ticket kiosk beside it.

tower_front / _back	~24 ea	x0-4	y0-10	z0 / z6	1-wide slits only
tower_left / _right	~24 ea	x0 / x4	y0-10	z1-5	
stair_inner	~12	x1-3	stepped inside the tower		
prop_1	~8	x6	y0-7	z3	each prop 1 cell,
prop_2	~6	x8	y0-5	z3	its own wall,
prop_3	~4	x10	y0-3	z3	standing on ground
prop_4	~2	x12	y0-1	z3	
slide_hi	~6	x5-7	y8 down to y6	z3	GLASS, bare
slide_mid	~6	x8-10	y6 down to y4	z3	GLASS, bare
slide_low	~6	x11-13	y4 down to y2	z3	GLASS, bare
pool_rim	~12	x10-13	y0-1	z2-4	
kiosk_shell / _roof	~14	3x3	y0-3	z5-6	

CUT: two props. The tube lets go and rains down the tower's flank in sections. The tower survives - that is the point.

WATCH: HIGHEST RISK IN THE MISSION. Every slide_* wall must contain at least one cell sitting DIRECTLY on a prop. A tube attached only to the tower's flank is held sideways, is never released, and hangs forever.
 Play this one in the Review gameplay tab before delivering.

LV7 LIGHTHOUSE 9 x 14 x 6 ~180 entries

Concrete rock base, tapering brick shaft stepping in twice, glass lantern room, keeper's cottage at the foot. First concrete of the mission.

base_left / _right	~14 ea	x0-8	y0-2	z0-5	CONCRETE, armoured
shaft_a_front / _back	~12 ea	x1-7	y3-5	z1 / z4	storey band 1
shaft_a_left / _right	~6 ea	x1 / x7	y3-5	z2-3	
shaft_b_*	~28	x2-6	y6-8		band 2, steps in 1
shaft_c_*	~22	x3-5	y9-11		band 3, steps in 1
lantern_ring	~10	x2-6	y12-13		GLASS, "bare": true
gallery_cap	~6	x2-6	y13		concrete, small
cottage_shell_a / _b	~10 ea	3x3	y0-2	z0-2	separate body
cottage_roof	9	3x3	y3	z0-2	

CUT: one side of shaft band 1. The whole tower rides over onto the cottage.
 WATCH: FIRST CANNON-GATED LEVEL. Rock does 0 to concrete at every level.
 Keep the base to 2-3 rows so the falling shaft smashes it, OR accept that the level cannot be 100%-ed on Rock. Decide and write it in the manifest.
 The cottage must not share a wall with the base.

LV8 SEA FORT 12 x 10 x 8 ~220 entries

Squat concrete casemate on a stone plinth with a continuous glass observation slit, brick barracks in the open court. The mission's anatomy level.

plinth_left / _right	~22 ea	x0-11	y0-1	z0-7	CONCRETE
shell_front_a / _b	~12 ea	x0-11	y2-3	z0	split left/right

```

shell_back_a / _b      ~12 ea  x0-11  y2-3  z7
shell_left / _right    ~12 ea  x0 / x11 y2-3  z1-6
slit_front / _back     ~12 ea  x0-11  y4-5  z0 / z7  GLASS, bare
slit_left / _right     ~12 ea  x0 / x11 y4-5  z1-6    GLASS, bare
shell_upper_a / _b     ~20 ea  perimeter y6-7
barrack_1_shell / _roof ~14     3x3     y2-5  z2-3  separate body
barrack_2_shell / _roof ~14     3x3     y2-5  z5-6  separate body
battlement_a / _b     ~10 ea  perimeter y8-9  alternating caps

```

CUT: none. The way in is the slit. Shoot through it, gut the barracks, the shell is left standing over nothing.

WATCH: the slit must be continuous - no concrete mullions - and wide enough to shoot through at a shallow angle. Barracks separate from the shell and from each other. Keep the shell one cell thick or the level is a grind.

LV9 BOARDWALK RESORT (BOSS) 16 x 12 x 10 ~300 entries

Lifeguard tower + beach bar + pier stub sharing one beach. Graduation.

```

TOWER at x0-5  - LV2's recipe exactly, one row shorter
BAR   at x7-11 - LV4's recipe, roof one row lower
PIER  at x12-15 - LV3's recipe, two bents instead of four
breakwater_a / _b ~16 ea  x0-15  y0   z9   CONCRETE, armoured

```

Place them so the tower's fall line crosses the pier, and the pier deck overhangs the bar's roof. Measure it - that is the level's whole design.

CUT: three of them, in order. Tower onto pier, pier onto bar.

WATCH: budget is the enemy - 300 entries and three structures on a grid that is at its ceiling on every axis. Build each structure one size smaller than its own level. Nothing may weld across the gaps between them.

CHECKLIST PER LEVEL

```

[ ] every leg / post / pile is one cell wide and its own wall
[ ] horizontal slabs split left / right
[ ] roof is an eave row plus a ridge row
[ ] shell in small named pieces, lintels carried around a corner
[ ] zero loose blocks
[ ] every raised mass has a cell directly over a leg
[ ] separate structures share no wall
[ ] glass "bare": true; brick and concrete no flag
[ ] validator 0 errors, 0 unfooted, 0 floating
[ ] entries within the level's target, walls 4-24 cells

```

END
